

# Predict Potential Business Services in Vietnam

Le Huy Hoang

July 05, 2021

# Outline

- Introduction
- Data
- Methodology & Analysis
- Results
- Conclusion

# Introduction

- Vietnam is a country in Southeast Asia with a population of over 96 millions.
- With rapid urbanization and the emerging of middle class, Vietnam has become a very attractive investment destination.
- By predicting development trends in Service Sector, the project will help
  - Investors to make their decisions.
  - Urban planners to optimize the effectiveness of land use and infrastructure.

# Data

- We are going to analyze services' structures in the two cities
  - [Shanghai, China](#)
  - Singapore

Then compare their common characteristics with the status of [Hanoi, Vietnam](#) to assess the accuracy.

- The list of districts in each city will be extracted from Wikipedia (except [Singapore](#))
- Locations of districts will be obtained from [OpenStreetMap](#)
- Venues in the cities will be queried from [Foursquare Database](#)

# Data – Shanghai, China

- Districts with locations

Area	Latitude	Longitude
Huangpu, Shanghai	31.2322758	121.4692071
Xuhui, Shanghai	31.163698	121.4279938
Changning, Shanghai	31.2092762	121.3899859
Jing'an, Shanghai	31.2297756	121.44306
Putuo, Shanghai	31.2513263	121.3912291
Hongkou, Shanghai	31.266703	121.501751
Yangpu, Shanghai	31.2620112	121.5214305

# Methodology & Analysis

- Collect information of venues around the divisions of the cities
- Remove divisions with less than 10 venues
- Encode venues' categories using One-hot Encoding
- Use [K-means Clustering](#) to segment divisions in each city based on their encoded venues' categories
- To find the best number of clusters, [Elbow Method](#) & [Silhouette Score](#) are used
- The most common venues in each cluster will be summarized
- The set of business services which are common in both Shanghai & Singapore will be extracted as prediction results
- The results will be compared with the service structure of Hanoi, Vietnam to evaluate the prediction 's performance

# Methodology & Analysis

- Shanghai, China

Best number of Clusters: 5

# Methodology & Analysis

- Shanghai, China

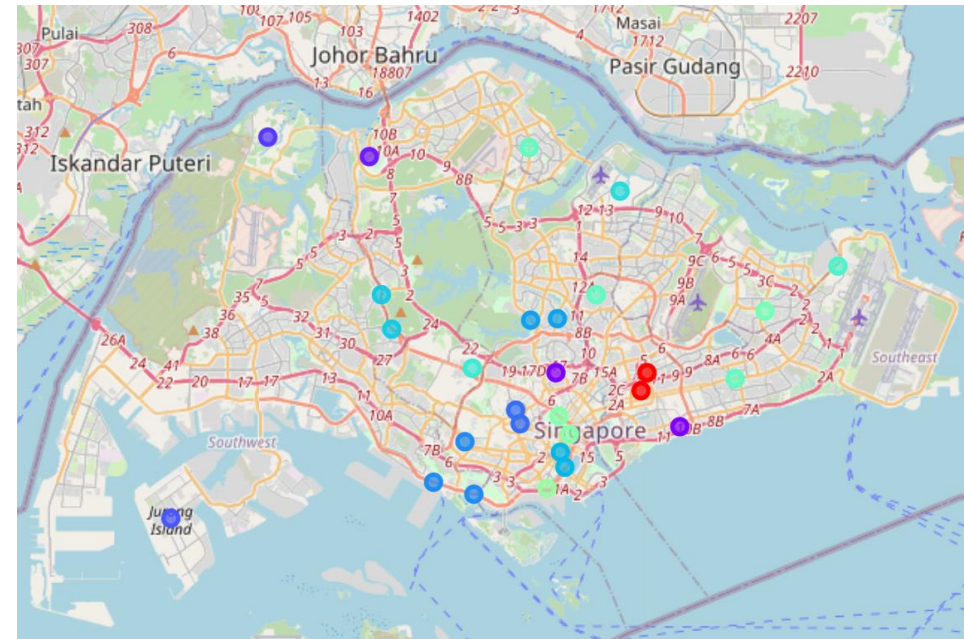

## Summary of clusters with most common venues

Cluster	Most Common Venues		
	1st	2nd	3rd
0	{ 'Coffee Shop' }	{ 'Japanese Restaurant', 'Hotel', 'Fast Food Restaurant' }	{ 'Italian Restaurant', 'Hotel', 'Fast Food Restaurant', 'Shopping Mall' }
1	{ 'Hotel' }	{ 'Garden' }	{ 'Food' }

5	{ 'Vietnamese Restaurant' }	{ 'Auto Garage' }	{ 'Shopping Mall' }

# Results

- In both Shanghai, and Singapore, Restaurant, Coffee Shop, and Hotel are the most popular services
- In Shanghai, Fast Food is the most popular type of restaurants, while in Singapore, people seem to prefer Foreign Cuisines
- From the similarities between Shanghai, and Singapore, we could predict that Restaurant, Coffee Shop, and Hotel will be the most promising business services in other cities in the nearby regions
- The prediction is matched with the service structure in Hanoi, one of the biggest cities in Vietnam

# Conclusion

- By analyzing the similarities in the business structures of Shanghai, China, and Singapore, a set of potential business services in Vietnam has been extracted.
- The accuracy of the prediction has been proved by comparing to the data of Hanoi, one of the biggest cities in Vietnam
- Improvement ideas
  - To dig further into the densities of venues in each city to find out saturation thresholds
  - To utilize historical aspects to customize the prediction for each city
